

ABSTRACT OF THE DISCLOSURE

5 A mobile wireless communication device, for example a cellular
handset or pager or wireless communication enabled personal digital assistant or
personal computer having a processor (10) coupled to memory (20) and an input
pad (50) having a plurality of input keys. Multiple communication addresses are
stored (300) in memory and associated (310) with one or more inputs of the same
input key, for example a first telephone number is associated with a single input of
10 a key, and a second telephone number is associated with two sequential inputs of
the same input key as the first telephone number, etc. The communication
addresses are transmitted (320) from the wireless communication device upon
entering the one or more key inputs associated therewith and upon maintaining a
last of the sequential key inputs for a predetermined time interval.
